

# Coastal Environment's Projects Vs. Qatar's Environmental Law and Project's Opportunities

# Coastal Environment's Projects Vs. Qatar's Environmental Law and Project's Opportunities

## Summary

Qatar is a peninsula, about 180 km long and 85 km wide, covering an area of approximately 11,500 km<sup>2</sup>, which is surrounded on three sides by the waters of the Arabian Gulf and is directly connected by land, in the south, to Saudi Arabia. The State of Qatar has seen fast paced development and industrialization, with social and economic changes taking place at an unprecedented rate. This rapid development and the growing resident population inevitably place pressures on the natural environment. However, these pressures can be monitored and managed to ensure that sustainable development and the vision set out in the country's development strategy 2030 can be achieved, coupling socio-economic benefits with the conservation of biodiversity and natural heritage.

The research study and findings in this document encompass a critical analysis of the existing Qatari Environmental Law in relation to relevant projects conducted by Coastal Environment, Inc USA (CE)([www.coastalenvironments.com](http://www.coastalenvironments.com)) with related opportunities that can be explored in the State of Qatar. The emphasis has been laid on the Environmental Law with a view to access their efficacy in dealing with environmental related projects. This has been done by analyzing the nature and origin of these law and the extent to which they function towards the protection of the environment. The related opportunities in this context can be explored with the Government sectors such as Ministry of Environment, Ministry of Transport and Communication etc., Qatar Tourism sector such as Hotels, Oil & Gas sector such as Qatar Petroleum, Island projects, Qatar Navy, shipping and logistics companies, Consultants and contractors with projects related to the Marine environment and various stakeholders..

The feasibility study analysis in this document helps in understanding and identifying relevant issues (Environmental Coastal issues) relating to Qatar in areas of different kind of projects already achieved by CE in setting those projects which bring elements of knowledge on the possibilities of identifying critical issues and environmental strategies in negotiating concerns of how possible we can achieve a good marine environmental ecosystem. These vulnerable ecosystems have come under increasing pressure in recent times as a result of the dramatic expansion of coastal development, and threats to these ecosystems are likely to accelerate in the coming years as Qatar's economy and population continue to grow. Although environmental regulation had historically lagged behind the rapid pace of development, in recent years Qatar's leadership has aggressively expanded environmental management as a result of the growing awareness of the importance of coastal ecosystems. While these improvements are encouraging, management remains challenged by its current project-driven focus.

The coastline of Qatar is a rich mosaic of productive and diverse coastal and marine ecosystems including mangrove forest, intertidal mudflats (Sabkha), seagrass beds and coral reefs which opens many opportunities to various related projects in the document. The Qatar markets is challenging as we have various competitors in the marine field but with the vast experience and expertise of our associate, Coastal Environments, Inc USA in this area of services, lots of similarly projects can be executed with better results locally and within the region.

| S/N | Title of Coastal Environments Projects   | Environmental Law Articles   | Remark   | Related Opportunities  |
|-----|--|--|--|--|
|     |  | Statement of Article   |  |  |
| 1   | <p><b>Commercial Basin- San Diego Bay, California</b></p> <p>Coastal Environments assisted Scripps Institute of Oceanography in San Diego with water quality monitoring during remediation dredging, sediment cleanup verification, and compliance with monthly regulatory reporting for San Diego Bay as per requirements issued by the Regional Water Quality Control Board. Field tasks included water and sediment sampling.</p> | <p><b>Article No. 76:</b></p> <p>The standards of the drainage water quality, criteria of the exhaust waters treated from the land industrial facilities used for the irrigation, criteria of the disposal of the industrial waste to the general waste, criteria of the treated drainage water and criteria of the composture water disposal will be determined in accordance with the standards, criteria, percentage and limits shown in the table attached to the <b>Annex 3 (Standards and Criteria of Environment Protection)</b> of these bylaws. The concerned department, in collaboration with the council, will undertake adopting the term and conditions necessary to arrange the best use of drainage water treated and having the quality prescribed in the <b>Annex 3</b> referred above, giving guideline to consume them and not to waste them and to utilize them for agriculture and irrigation.</p> | <p>According to the Article 76 there is a</p> <ul style="list-style-type: none"> <li>• standard for the discharge of industrial effluents into sewers</li> <li>• standard for discharging liquid waste to the public sewage network for treatment</li> <li>• standard for the treatment effluents sanitary wastewater</li> </ul> <p><b>In Annex 3/Second (Standards and Criteria of Wastewater Quality).</b></p> <p>The companies who discharge industrial effluents, liquid waste and sanitary wastewater should fulfill those standards during water quality monitoring and sediment clean-up process for compliance with regulatory bodies.</p> <p>In these cases, treatments, water quality monitoring and regulatory reporting of industrial effluents, liquid waste and sanitary wastewater is very important during remediation dredging activities to avoid destroying the coral reef and seagrass systems</p> | <p>Water Quality Monitoring and Water Sediment Quality Monitoring for Mwani (all Doha Ports), Pearl Qatar, Lusail, United Development Company (UDC) Island Projects (Gewan Island Project), Qatar Petroleum (QP), Qatalum, Qatar Navy etc.</p> <p>Dewatering projects during constructions with Ashghal and major players in construction activities such as Al Jaber, Consolidated Contractors Company (CCC), Boom Construction etc.</p> <p>Doha Wastewater Treatment Plants projects for Ashghal, Qatari Diar Vinci Construction (QDVC), Marubeni Corporation etc.</p> <p>Coral Relocations projects for Qatar Port Authority (Mwani),</p> |

|   |  |  |   | Ministry of Transport and Communication (MoTC) Qatar, UDC (Pearl Qatar), Lusail Real Estate Development Company, GHD, Qatar Tourism Authority, Dredging companies such as MEDCO etc.  |
| 2 | <p><b>Desalination Facility- San Diego, California</b></p> <p>As part of an economic feasibility study for the siting of a 30 MGD (million gallons per day) desalination facility, Coastal environments was responsible for environmental review by regulatory agencies and the municipal government, analysis of brine discharge options, and identifying the critical issues and strategies in negotiating environmental concerns with the power utility</p> | <p><b>Article No. 87:</b></p> <p>The parameters and specifications of the hazardous material disposed of in the water environment have been limited to the terms and conditions shown in the <b>Annex 4 (Criteria and specifications of the hazardous materials when disposed of in the water environments)</b> attached to these bylaws.</p> <p>Also, the liquid and illiquid materials damaging to the water environment and subject it to danger and prohibits for the ships and transporters to put or discharge in the regional sea or economic area of the state, from the organic and inorganic materials are described in the <b>Annex 4/2 (Liquid, illiquid, polluting and unsolvable materials prohibited to be disposed of in water environments)</b> attached to these bylaws.</p> | <p>Brine discharge, which is the fluid waste from a desalination plant, it returns back to the sea. The impacts of the brine discharge are due to the high level of salinity and total alkalinity and alteration to the temperature. These impacts could be considerable in terms of the influence on the marine organisms such as the development of species, survival of larva and breeding and reproductive traits. These are non-compliance with Qatari laws of the environmental protection <b>Annex 4 (Criteria and specifications of the hazardous materials when disposed of in the water environments)</b></p> <p>Feasibility study analysis helps in the initial design in sitting a project which brings elements of knowledge on the possibilities of identifying critical issues and environmental strategies in negotiating concern of how possible the brine discharge options are to the desalination plants, its effect and mitigation measures.</p> | <p>Environmental Impacts of desalination plants projects with Mwani, Ashghal, Qatar Electricity and Water Company (QEWC), Kahramaa, Pearl etc.</p> <p>Environmental and Marine Impact of Discharge Hazardous materials projects with Mwani Ports, MoTC, Ministry of Municipality and Environment (MME), QP, Manufacturing companies, etc.</p> <p>Marine Impact of Seawater Desalination with Mwani (All Doha Ports), Nakilat, Lusail, UDC Island Projects, Pearl.</p> |

|   |  |   |  |   |
|---|--|---|--|---|
|   |  |   | This kind of projects are referred in <b>Annex 1 No. 31 (Projects of desalination, filling and purification of drinking waters and distribution networks)</b>  | Environmental Marine pollution, spillages etc. with Nakilat, Milaha, Mwani Qatar Ports, Nature Reserves projects, Ashghal etc.  |
| 3 | <p><b>Shipyards Sediment Sampling and Analysis at San Diego Bay- San Diego, California</b></p> <p>Coastal Environments has been involved in an extensive sampling program with San Diego Bay Shipyards and Boatyards in order to determine water and sediment chemistry, primarily for the analysis of pollutant levels. As a primary solvent, water is a carrier of many dissolved chemicals. The analysis of water and sediment samples provides data related to environmental conditions. Coastal Environments team has been collecting these samples in various yards to assess the level of chemical contaminants and evaluate changes over time.</p> | <p><b>Article No. 88:</b></p> <p>The ships and offshore platforms are prohibited from discharging the drainage to internal waters or regional seas or exclusive economic area of the state. It should be disposed of as per the following criteria and procedures.</p> <ol style="list-style-type: none"> <li>1. The ship or the marine platform should be equipped with a unit to treat the drainage water</li> <li>2. Not to discharge the treated drainage water in the distance less than four seal miles from the coast</li> <li>3. If the ship or the marine platform discharges the wastes before treating them, it should not be in a distance less than 12 seal miles from the coastline.</li> </ol> <p>In all cases no ships or marine platform discharges the wastes kept in the tank at once but in medium quantities and the ship is sailed in a speed less than 12 seal miles from the coastline</p> <p>The discharge operation, whatsoever, should not cause to appear visible floating solids in the regional water not to cause for change in the color of these waters.</p> | <p>Considering the provision of the article (88) of the executive by laws of the environmental protection, ships and offshore platforms should follow the criteria and procedures in discharging pollutants. Also, Shipyards where ships are built or repaired which also emit pollutants that can dissolve in water should follow the same criteria</p> | <p>Environmental Marine pollution, spillages etc. with Nakilat, Milaha, Mwani Qatar Ports, Nature Reserves projects, Ashghal, Marine construction companies, etc.</p> <p>Remediation study and sediment analysis for N-KOM, Nakilat, Mwani Ports, MoTC, Qatar Emiri Naval Forces, Shell, QatarGas, etc.</p> <p>Wastewater drainage discharge from ships and offshore platform with the oil sector players (such as North Oil, QatarGas, RasGas, QP, Shell, Total, etc.) Nakilat, Milaha, Mwani Ports, Mediterranean Shipping Co. (MSC), Logistics companies</p> |

|   |  |  |  |  |
|---|--|--|--|--|
|   |  | <p>If the drainage water is mixed with water wastes must be treated, this treatment should be done before discharging them.</p> <p>These provisions are not applied in case of discharge for the safety of the ship or those who are on the board or to save the souls in the sea or due to any damage occurred to the ship or its equipment, provided that all the precautions should have taken to prevent this discharge or to minimize them to the maximum limit before and after such damage.</p>   |  |  |
| 4 | <p><b>Beach Stability at Doheny State Beach- Dana Point, California</b></p> <p>The California Department of Parks and Recreation retained Coastal Environments (CE) to assist in a project involving construction of a new lifeguard headquarters facility at Doheny State Beach. Doheny State Beach is located in southern Orange County just south of Dana Point Harbor in the City of Dana Point. It consists of 86 acres with frontage along 1.2 miles of the Pacific Ocean. The proposed facility would be at the back of the beach (about 260 ft away from the shoreline). CE's role was to evaluate the risks of damage to the proposed new facility from coastal forces resulting from storm waves and-or flooding from nearby San Juan Creek, which intersects Doheny State Beach and flows into the Pacific Ocean.</p> | <p><b><u>Article No. 92:</u></b></p> <p>No project or enterprise will be allowed to be established on the sea coasts up to minimum 200 meters inside from the coastline, nor to carry out business which may affect the natural way of the coast or alter it by entering in the direction of the sea water or reduce the line except with the approval of the concerned department in collaboration with the council and considering the provisions of the Law No. (4) of 1983, regarding the exploitation and protection of the living water wealth in Qatar and law No. (10) of 1987, regarding the private and public properties of the state.</p> <p><b><u>Article No. 93:</u></b></p> <p>The following procedure and conditions to be followed in licensing any projects or</p> | <p>Considering the provision of the article (92) of the executive by laws of the environmental protection, do not establish any project within 200 meters inside from the coastline. Also, should follow the procedures in article (93) such as</p> <ul style="list-style-type: none"> <li>• Documentation procedures</li> <li>• Environmental Impact Assessment (EIA)</li> <li>• Provide the necessary means to treat the wastes</li> <li>• Justifications of economic and social perspective and confirm of non-availability of alternative place for project</li> <li>• The decision of the council about the environmental license</li> </ul> <p>The projects which are listed under article (92) and (93) comply with</p> | <p>Beach stability and nourishment projects for MME, Qatar Tourism Authority, Ashghal etc.</p> <p>Sea water Monitoring and storm waves modeling analysis (Waves and currents of the beaches) for Mwani Ports, UDC (Pearl Island), Lusail projects, MoTC, QP (Dukhan, Mesaieed etc.), Qetafien Projects, Hotels etc.</p> <p>Reclamation and Beach Profiling with Qatar Tourism Authority, MME, MoTC, Ashghal, Hotels etc.</p> |

|   |  |   |   |  |
|---|--|---|---|--|
|   | Tasks included conducting beach profiles, wave modeling analysis to estimate the design wave for various return periods, computation of wave run-up and overtopping, and computation of San Juan Creek mouth water levels for various flood return periods   | enterprises or to practice any business in the foregoing paragraph:<br>1. Submit the application to the concerned department on the form given in the <b>Annex 2/2- (Application form for Environmental License)</b> attached to these bylaws, attached with documents, information and required studies.<br>2. Conduct an environmental impact evaluation study in accordance with the section two of the chapter one of these bylaws, explaining the extent of the impact made by the project or the business on the environmental balance of the coastal area, Coastline and its natural ways, particularly the following<br>a. Slaughtering<br>b. Sedimentation<br>c. Coastal Waves<br>d. Pollution resulted from the project or business<br>e. Works, precautions and plans suggested to avoid or treat the impacts, if any<br>3. Provide the necessary means to treat the materials or wastes or liquids that may be discharged and any cause for the pollution of the coasts or adjacent waters.<br>4. Justifications for the establishment of the project in the economic and social perspective and confirm the non-availability of alternative places to establish the project therein.<br>5. The secretary general undertakes the study of the environment license | environmental protection law article (92) and (93) at least one procedure which are listed above.   | Marine and Environmental Impact Assessment (EIA) for MoTC, Mwani Ports, Ashghal, Nakilat, Milaha, QP etc.<br><br>Beaches erosion and monitoring with MME, Qatar tourism authority (QTA), Hotels, etc.<br><br>Beach profiling projects with Hotels, QTA, MME, etc.<br><br>Beach monitoring programs with MME, Qatar hotels, Pearl, Lusail, QTA, etc.<br><br>Coastal development programs and plan projects with Qatar Naval Force, Qatar Army (such as Al Udeid base), Hotels, MME, Mwani (all Qatar ports), etc. |
| 5 | <b>San Onofre Beach Monitoring Program- San Clemente, California 41-2</b><br><br>In this study, Coastal Environments implemented a beach monitoring program at the San Onofre Nuclear Generating Station, located in San Clemente, CA, for Southern California Edison. This project included measurements and analysis of beach profiles and interpretation of existing wave data in an effort to evaluate beach stability near the nuclear power plant and determine the amount of sand transport in the area. The profiles documented in the study proved crucial for assessing the impact of removing a laydown construction pad from the nearby beach. |   |   |  |
| 6 | <b>Overtopping Study, UNOCAL-Santa Maria, California 53-2</b><br><br>Coastal Environments was retained to evaluate beach characteristics and   |   | Coastal harbors play a vital role as economic hubs in terms of trade, communications and tourism. The adequate development of port activities depends on the ability of the |  |

|   |  |   |  |  |
|---|--|---|--|--|
|   | <p>generate design beach profiles in relation to stability assessment of the Guadalupe Dunes sheet pile wall. The Guadalupe Dunes Oil Field lies east of and extends down onto the alluvial plain of the Santa Maria River. A contaminant plume had been contained by installation of an HDPE wall. UNOCAL constructed a 360-foot-long steel cantilever sheet pile wall to protect the existing HDPE wall from becoming breached by discharges from the Santa Maria River. The primary purpose of this study was to satisfy the Coastal Development Permit requirements pertaining to the stability of the wall during proposed excavation activities. The goal was to prevent the release of hydrocarbons into the environment in the event of overtopping, flooding, or failure.</p> | <p>application for the project or the application for approval on the business to be established after the application and the attached documents are referred to it. The decision of the council about the environmental license or the approval is issued in accordance with the procedures described in the section two of the chapter one from, these bylaws. Fulfill other terms prescribed by the concerned department in accordance with the nature of the project or the business to be licensed for and as per the requirements of the above referred Law Nos. (4) of 1983 and (10) of 1987.</p> | <p>protecting structures for providing shelter and facilities to the users. In particular, coastal harbors must be able to offer operating conditions during most of the year and withstand extreme wave conditions, minimizing economic risks as well as risks for humans, their properties, and the environment.</p> <p>Consequently, overtopping is one of the most important phenomena concerning both the functional efficiency and the structural safety of coastal and port structures, such as breakwaters, which frequently patterns the severity of strong chemical such as hydrocarbon to examine critical locations along the structure, to define proper control measures and to minimize flooding of the infrastructure as much as possible, to attain the expected standard of performance.</p> |  |
| 7 | <p><b>Laguna Madre Coastal Development Project- Tamaulipas, Mexico 47-1</b></p> <p>The Laguna Madre, the largest coastal lagoon in Mexico, is located on the Gulf of Mexico and spans between Texas and Mexico. It's portion in Mexico is approximately 120 miles long and 3–8 miles wide. One of the major problems in the area is a lack of tidal inflow to the lagoon. As a result, the southern area has become dry over the past 50 years.</p>  |   | <p>During coastal development, diverse habitats, air and water are essential to a better quality of life. In order to achieve this quality of life, we must integrate economic, ecosystem and societal needs in all elements of development and planning.</p> <p>Projects that integrate conservation, education, sustainable harvest, and economic stability in this area also should be supported. This</p>  | <p>Lagoon restoration and tourist development projects with MME, Ashghal, Katara Cultural Village projects, Hotels, UNESCO, QTA, etc.</p> <p>Lagoon hydrodynamic, 3D Hydrodynamics and modelling projects with</p> |

|   |   |  |   |  |
|---|---|--|---|--|
|   | <p>Coastal Environments' work in Laguna Madre was part of a dual-purpose project involving lagoon restoration and tourist development. The latter portion of the project included marinas and navigation channels. Tasks included studying lagoon hydrodynamics and proposing various alternatives for lagoon restoration and navigation channels.</p>  |  | <p>comprehensive approach will further the goal of achieving the protection of a unique natural resource and the viability of local human populations that depend upon it, creating challenges to define what should be targeted as management goals.</p> <p>Long-term monitoring data is needed on both physical and biologic components of the system that would also improve the science-based decision processes.</p> | <p>QTA, MME, Ashghal, Qatar Navy, Hotels etc.</p> <p>Coastal development Plans and Projects with QTA, MME, Hotels, Qatar Navy, Supreme committee 2022, Ashghal, Lusail, UDC (Pearl), etc.</p> <p>Navigational aid and channel installation and supply projects with Mwani (all Qatar ports), MME, Ashghal, Pearl, Lusail, UDC (Pearl) etc.</p> <p>Sea-level rise and data consequences project with Mwani (all Qatar ports), Hotels with beach, Qatar Navy, Milaha, Nakilat, QP, MoTC, Ashghal, etc.</p> |

| 12 | <p><b>Wave Climate Analysis for Vencor's Holly Pipelines Program- Santa Barbara County, CA 34-2</b></p> <p>Coastal Environments conducted a wave analysis study for Vencor's Holly Pipelines, which extend from the platform to an onshore processing plant, which is located east of Ellwood Pier. The purpose of the study was to describe the nearshore wave characteristics (height, period, and direction) and to estimate longshore currents caused by breaking waves that create a load on the pipes. The pipes are frequently unburied due to beach erosion in the surf zone and offshore, which exposes them to wave and current forces.</p> <p>This information was used to carry out stress and material fatigue analyses to assess the pipelines' capacity to withstand wave and current loading. This study is important for prevention of a sudden failure of the pipelines, which could halt the crude oil and gas production operation at Holly Platform.</p> |  |   | <p>Wave and current loads for Pipelines Stability projects with Oil and Gas companies (such as QP, North Oil, Mesaieed Industrial City, Ra Laffan, Qatar Shell etc.) Dredging companies such as (MEDCO etc.), Ashghal, Qatar Port, MME, Nakilat, Milaha, Marine engineering companies.</p> <p>Directional wave, current, wind, water temperature and tidal studies projects with Qatar Port, Nakilat, Milaha, MME, Ashghal, Qatar Navy, Lusail, Pearl, Hotels, QP, etc.</p> <p>Tidal and storm surge flooding analysis projects with Qatar Ports, Hotels, Lusail,</p> |

| 13 | <p><b>Venice Lagoon, Sediment Study for Ecosystem Restoration- Venice, Italy 36-2</b></p> <p>Coastal Environments assisted Scripps Institute of Oceanography to studied sediment transport in Venice Lagoon, Italy in an effort to address flooding problems from the lagoon into Venice and to assess conditions for a lagoon restoration project. Approximately 55,000 m3 of sediment is lost every year when it moves into the Adriatic Sea. Substantial efforts have been made to minimize this erosion, including construction of submerged banks from dredge material.</p> <p>This study was designed to investigate the effects of these banks on near and far-field flow and local bathymetry. The results of this study provided information about the physical processes occurring in the lagoon, identified the most significant sources of erosion at the bank sites, addressed the impacts of the banks on near and far-field flow currents, and evaluated geomorphologic changes at the banks and in their vicinities.</p> | <p><b>Article No. 92:</b></p> <p>No project or enterprise will be allowed to be established on the sea coasts up to minimum 200 meters inside from the coastline, nor to carry out business which may affect the natural way of the coast or alter it by entering in the direction of the sea water or reduce the line except with the approval of the concerned department in collaboration with the council and considering the provisions of the Law No. (4) of 1983, regarding the exploitation and protection of the living water wealth in Qatar and law No. (10) of 1987, regarding the private and public properties of the state.</p> <p><b>Article No. 93:</b></p> <p>The following procedure and conditions to be followed in licensing any projects or enterprises or to practice any business in the foregoing paragraph:</p> <p>6. | <p>Coastal Environments (CE) was responsible for the engineering support and construction verification of Southern California Edison's Experimental Artificial Kelp Reef in San Clemente, CA. The experimental reef was constructed to gain information prior to construction of a 150-acre mitigation reef that would be built to mitigate fish and associated biota losses resulting from operation of the San Onofre Nuclear Generating Station. The reef consisted of 22.4 acres constructed of recycled concrete and quarry rock. Technical specifications for design of the reef were completed by CE prior to its construction. Verification monitoring was conducted, including on-site verification, sidescan sonar verification, diver surveys, and video monitoring. Photographs were collected during the 35-day construction process. Compliance with all applicable permits was achieved.</p> | <p>impact made by the project or the business on the environmental balance of the coastal area, Coastline and its natural ways, particularly the following</p> <ol style="list-style-type: none"> <li>f. | 15 | <p><b>Environmental Impact Report Consulting for the Southern California Edison Kelp Reef – San Clemente, California 64-1</b></p> <p>Coastal Environments (CE) provided consulting services for Resource Insights for the Program Environmental Impact Report (PEIR) required for the construction and management of an artificial reef near San Clemente, CA. CE provided studies for this PEIS that helped determine the effects of existing kelp reefs on coastal processes such as waves, currents, beach widths, and kelp wrack. Additionally, CE performed a review of alternative sites for the kelp reef, taking factors such as the presence of historical kelp reefs, substrate type, location in relation to existing kelp reefs, depth, navigation, rivers, sewer discharges, cultural resources, parks and reserves, and proximity to the San Onofre Nuclear Generating Station into account. The PEIS was completed in 1998 and the completion of the entire 150 acres of reef was completed in 2008</p> |   | <p>This study includes site selection, baseline environmental, project impact on the environment, environmental impact assessment, mitigation measurement, and environmental management plan of the kelp reef. These examines all aspects and activities of the study area in terms of the impact on the environmental components, provide the best alternatives to preserve the environment, and avoid potential negative effects during the establishment and operation of the project in order to outline the issues that need to be considered when establishing an EIR for reef, ports, harbors, marinas and other related facilities.</p> <p>However, as each development intervention is unique, key issues may differ from project to another. Accordingly, specific key issues may be identified through a planning focus meeting and through consultation with the existing community.</p> | <p>Marine and Environmental Impact Assessment (EIA) for Qatar Navy, MoTC, Mwani Ports, Katara Cultural village, Ashghal, Nakilat, Milaha, QP etc.</p> <p>Marine ecological survey and study projects with Mwani (all Qatar port), Nakilat, Milaha, Katara Cultural village, Hotels, Ashghal, MoTC, etc.</p> <p>Seawater Monitoring (waves, currents, beach widths and kelp wrack) studies and survey projects with Qatar Port, Nakilat, Milaha, MME, Ashghal, Qatar Navy, Lusail, Pearl, Hotels, QP, Katara, all island projects etc.</p> |
